UNIVERSITY PRESS

Great Clarendon Street, Oxford, OX2 6DP,  
United Kingdom

Oxford University Press is a department of the University of Oxford.  
It furthers the University's objective of excellence in research, scholarship,  
and education by publishing worldwide. Oxford is a registered trade mark of  
Oxford University Press in the UK and in certain other countries

# Contents

|   |           |
|---|-----------|
| <b>Preface</b>  | x         |
| <b>Acknowledgments</b>  | xiv       |
| <b>1 Introduction: The Physical Theory and the Esthetics of Clouds</b>  | <b>1</b>  |
| 1.1 What are clouds and why do they matter?   | 1         |
| 1.2 Saturating the air: Atmospheric thermodynamics and cloud initiation   | 6         |
| 1.3 Nucleation and the growth of liquid water droplets and ice crystals:<br>Cloud microphysics                          | 9         |
| 1.4 The beauty and morphology of clouds: What does a cloud look like?   | 16        |
| 1.4.1 Clouds as depicted by artists   | 17        |
| 1.4.2 How large are clouds?   | 23        |
| 1.4.3 How long do clouds last?  | 25        |
| 1.5 The life of a cloud as experienced by a mobile battalion of air<br>molecules  | 26        |
| 1.6 The life of a cloud as viewed by a stationary, ground-based observer  | 28        |
| 1.7 Passing through a cloud vertically, or through a cloud, darkly:<br>Looking at clouds from both sides (now)          | 30        |
| 1.8 Cloud classification  | 33        |
| <b>2 Non-buoyant Clouds in a Stable Atmosphere</b>  | <b>44</b> |
| 2.1 Stratiform clouds   | 44        |
| 2.1.1 Stratus and fog   | 44        |
| 2.1.2 Sheets of stratiform clouds at high altitudes: Altostratus and<br>cirrostratus, and anvils from convective clouds | 63        |
| 2.2 Orographic clouds: Clouds created by the unique airflow<br>characteristics near mountains                           | 68        |
| 2.2.1 Airflow near mountains: Unblocked flow, blocked flow, and<br>gravity-wave generation and propagation              | 74        |
| 2.2.2 Cap clouds, foehn clouds, and banner clouds   | 82        |
| 2.2.3 Vertically propagating and vertically trapped gravity waves in<br>the lee of mountains                            | 91        |
| 2.2.4 Examples of orographic wave clouds  | 99        |
| 2.2.5 Hydraulic jumps   | 106       |
| 2.2.6 Bar clouds  | 119       |
| 2.2.7 Rotors  | 122       |
| 2.2.8 Flying saucers: <i>Alto cumulus lenticularis</i>  | 124       |

|          |  |            |
|----------|--|------------|
| 2.2.9    | Kelvin—Helmholtz billows and whale clouds  | 139        |
| 2.2.10   | Chaotic or unsteady waves  | 147        |
| 2.3      | Boundary-layer rolls and bores   | 147        |
| 2.4      | Isolated cirrus  | 155        |
| 2.4.1    | Cirrus with vertical structure   | 157        |
| 2.4.2    | Flat cirrus  | 163        |
| 2.4.3    | Cirrocumulus   | 163        |
| 2.4.4    | Contrails: Artificial cirrus clouds  | 165        |
| 2.5      | Summary  | 194        |
| <b>3</b> | <b>Buoyant Clouds: Part I. Convective, Non-precipitating Clouds</b>  | <b>198</b> |
| 3.1      | How clouds become buoyant  | 198        |
| 3.2      | Stratocumulus  | 212        |
| 3.3      | Alto cumulus not associated with orography: Patterns of clouds at midlevels not near mountains   | 213        |
| 3.3.1    | Alto cumulus with little vertical development  | 215        |
| 3.3.2    | Alto cumulus <i>floccus</i>  | 219        |
| 3.4      | Cumulus  | 219        |
| 3.4.1    | Cumulus <i>humilis</i> , cumulus <i>mediocris</i> , and cumulus <i>fractus</i>   | 219        |
| 3.4.2    | Cumulus <i>congestus</i>   | 225        |
| 3.4.3    | Alto cumulus <i>castellanus</i>  | 236        |
| 3.4.4    | Convective cloud lines   | 244        |
| 3.5      | Summary  | 257        |
| <b>4</b> | <b>Buoyant Clouds: Part II. “Deep,” Convective, Precipitating Clouds</b>   | <b>259</b> |
| 4.1      | Basic dynamical principles governing the behavior of air motion in convective clouds: Positive and negative buoyancy, and interaction with the environment | 259        |
| 4.2      | The cumulonimbus: Remembrances of convective bubbles past  | 265        |
| 4.2.1    | Radar observations of convective storms: Looking inside storms from a safe distance  | 272        |
| 4.3      | Ordinary cells and multicells  | 296        |
| 4.3.1    | Mamma and reticular clouds: Upside-down convection   | 301        |
| 4.3.2    | Convective cloud tops as mountains   | 307        |
| 4.3.3    | Downdrafts, gust fronts/density currents and outflow boundaries (arcus/shelf clouds): Jumping over cold pools  | 313        |
| 4.3.4    | Bores: Gravity waves triggered by density currents   | 332        |
| 4.3.5    | Regeneration of cells along gust fronts  | 338        |
| 4.3.6    | Lowered cloud bases: Wall clouds and scud  | 342        |
| 4.3.7    | Cloud electrification  | 342        |
| 4.3.8    | Summary of ordinary and multicell convective storms  | 347        |

viii *Contents*

|        |   |     |
|--------|---|-----|
| 4.4    | Supercells  | 350 |
| 4.4.1  | Dynamics of supercells: Why they don't move along with the wind, why they rotate, and what causes their unique architecture | 352 |
| 4.4.2  | Precipitation and its effect on the visual appearance of supercells   | 378 |
| 4.5    | Mesoscale convective systems  | 392 |
| 4.5.1  | Squall lines: Quasi-linear (mesoscale) convective systems (QLCSs)   | 397 |
| 4.5.2  | Bow echoes: Extreme QLCSs   | 401 |
| 4.6    | Overall summary of convective storms  | 405 |
| 5      | <b>Clouds Influenced by Rotation</b>  | 413 |
| 5.1    | Clouds associated with vortices   | 413 |
| 5.2    | Funnel clouds, tubular clouds, and debris clouds  | 418 |
| 5.3    | Visual appearance of tornadoes: 'The debris is blowin' in the wind'   | 423 |
| 5.4    | Pressure in a tornado and its relationship to its funnel cloud  | 423 |
| 5.5    | More visual characteristics of tornadoes and waterspouts  | 430 |
| 5.6    | Tornado dynamics  | 452 |
| 5.7    | Types of tornadoes  | 464 |
| 5.7.1  | Tornadoes (and waterspouts) associated with mesocyclones in supercells  | 465 |
| 5.7.2  | Non-mesocyclone tornadoes (landspouts), quasi-linear convective system tornadoes, and waterspouts                           | 468 |
| 5.7.3  | Gustnadoes  | 474 |
| 5.8    | Dust devils   | 475 |
| 5.9    | Steam devils  | 478 |
| 5.10   | Other tornado-like phenomena  | 479 |
| 5.10.1 | Fire whirls/tornadoes   | 480 |
| 5.10.2 | High-based funnel clouds and horizontal tubular clouds  | 480 |
| 5.11   | The tropical cyclone eyewall and meso-vortices  | 491 |
| 5.12   | Summary   | 495 |
| 6      | <b>The Future of Cloud Observing</b>  | 500 |
| 6.1    | Webcams, crowdsourcing, and social media  | 500 |
| 6.2    | The view from drones: Spying on clouds  | 502 |
| 6.3    | Stereoscopic cloud photography: An in-depth view of clouds  | 503 |
| 6.4    | Infrared cloud photography: Putting the heat on clouds  | 503 |
| 6.5    | Emerging radar systems: Seeing the previously unseen  | 505 |
| 6.5.1  | Electronically (rapid-scan) scanning radars   | 505 |
| 6.5.2  | Fine-scale networks of low-powered radars   | 506 |
| 6.5.3  | High-frequency "cloud" radars   | 506 |

|  |            |
|--|------------|
| 6.6 Climate change and clouds  | 507        |
| 6.7 Summary  | 508        |
| <b>Appendix 1. How changes in vorticity with time can be explained without explicitly taking the pressure into account</b>   | <b>510</b> |
| <b>Appendix 2. Camera equipment, film, and the evolution of cloud photography techniques a. Camera equipment and film b. Some thoughts on taking cloud photographs: A brief personal history</b> | <b>512</b> |
| <b>Glossary of key terms</b>   | <b>516</b> |
| <b>Suggested further reading</b>   | <b>527</b> |
| <b>Index</b>   | <b>529</b> |
